Taxi and Ride-Hailing Drivers Gravitare Toward the City Center

Traffic Congestion

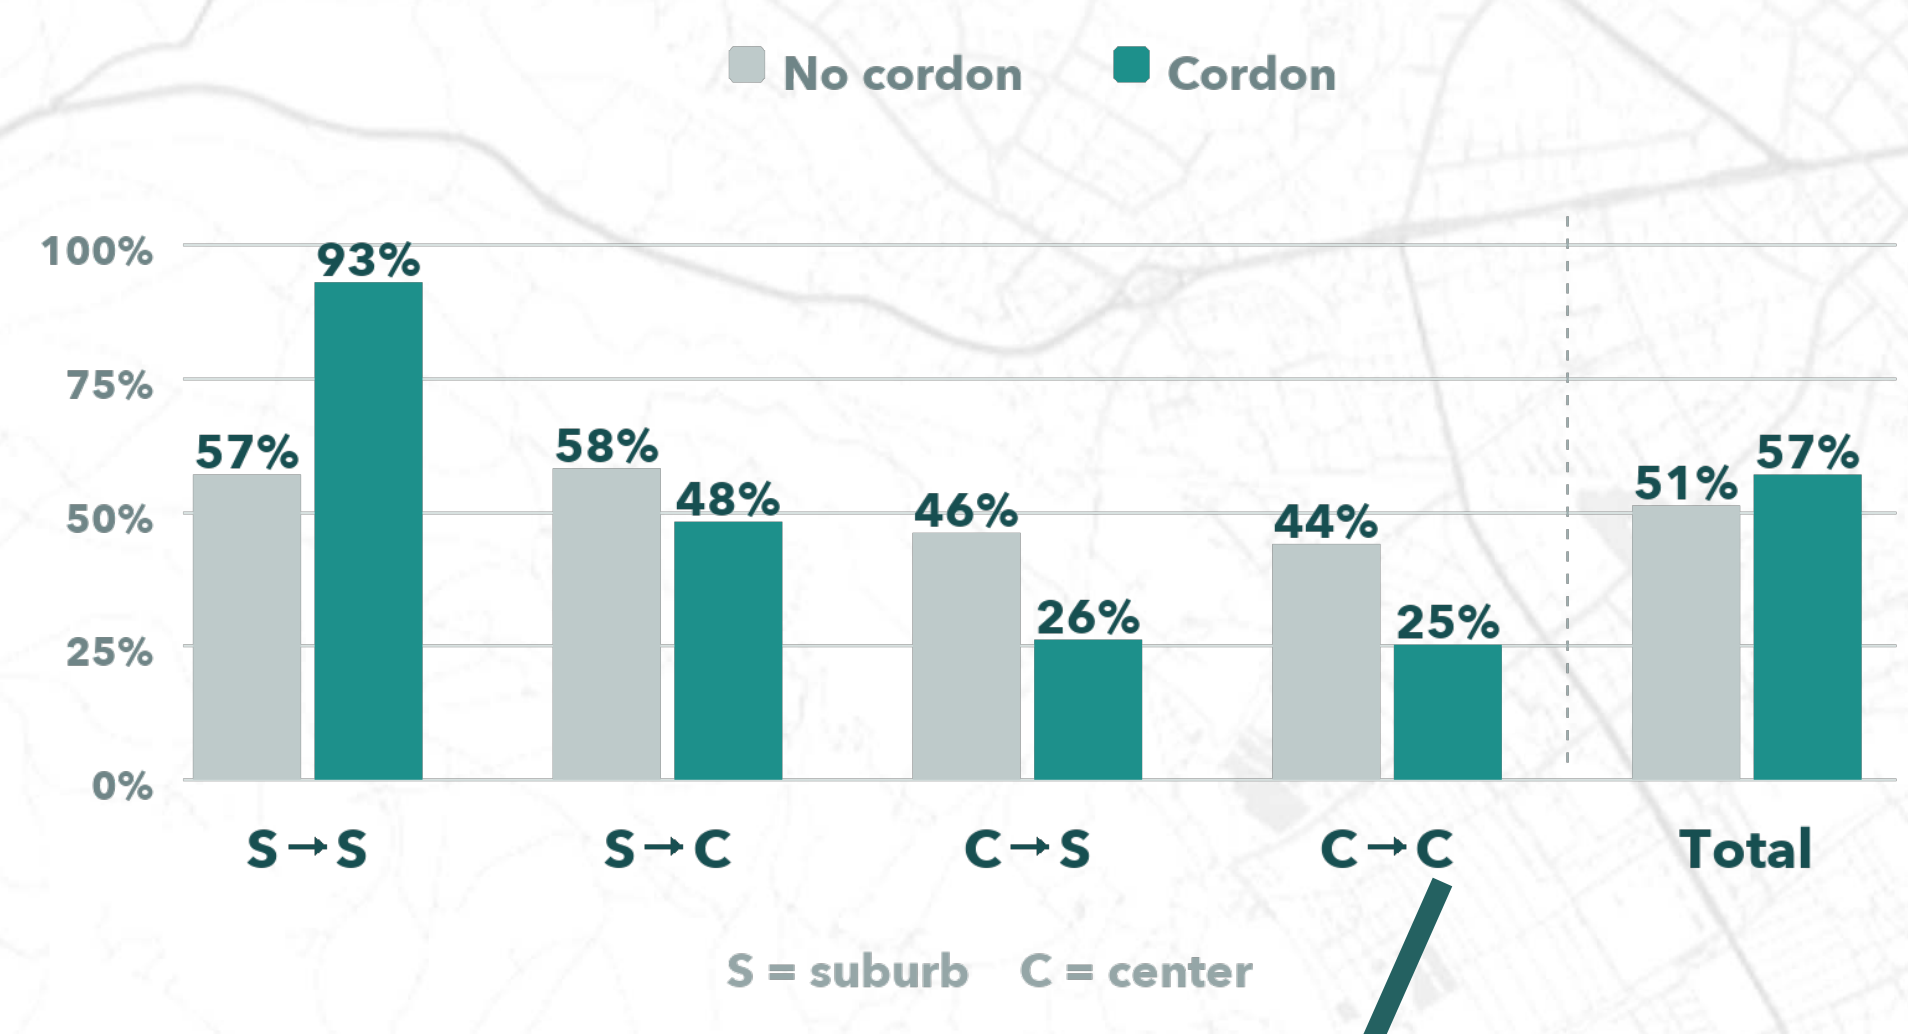

Underserved Periphery

Setting Cordon Areas

Limit taxi access to the center: during rush hours, taxis can enter only if they are permitted ●

Total number of permits is fixed as **N**. They are a scarce resource to be allocated.

Service Rate Comparison

Demand in the city center is encouraged to shift to public transportation (green & efficient)

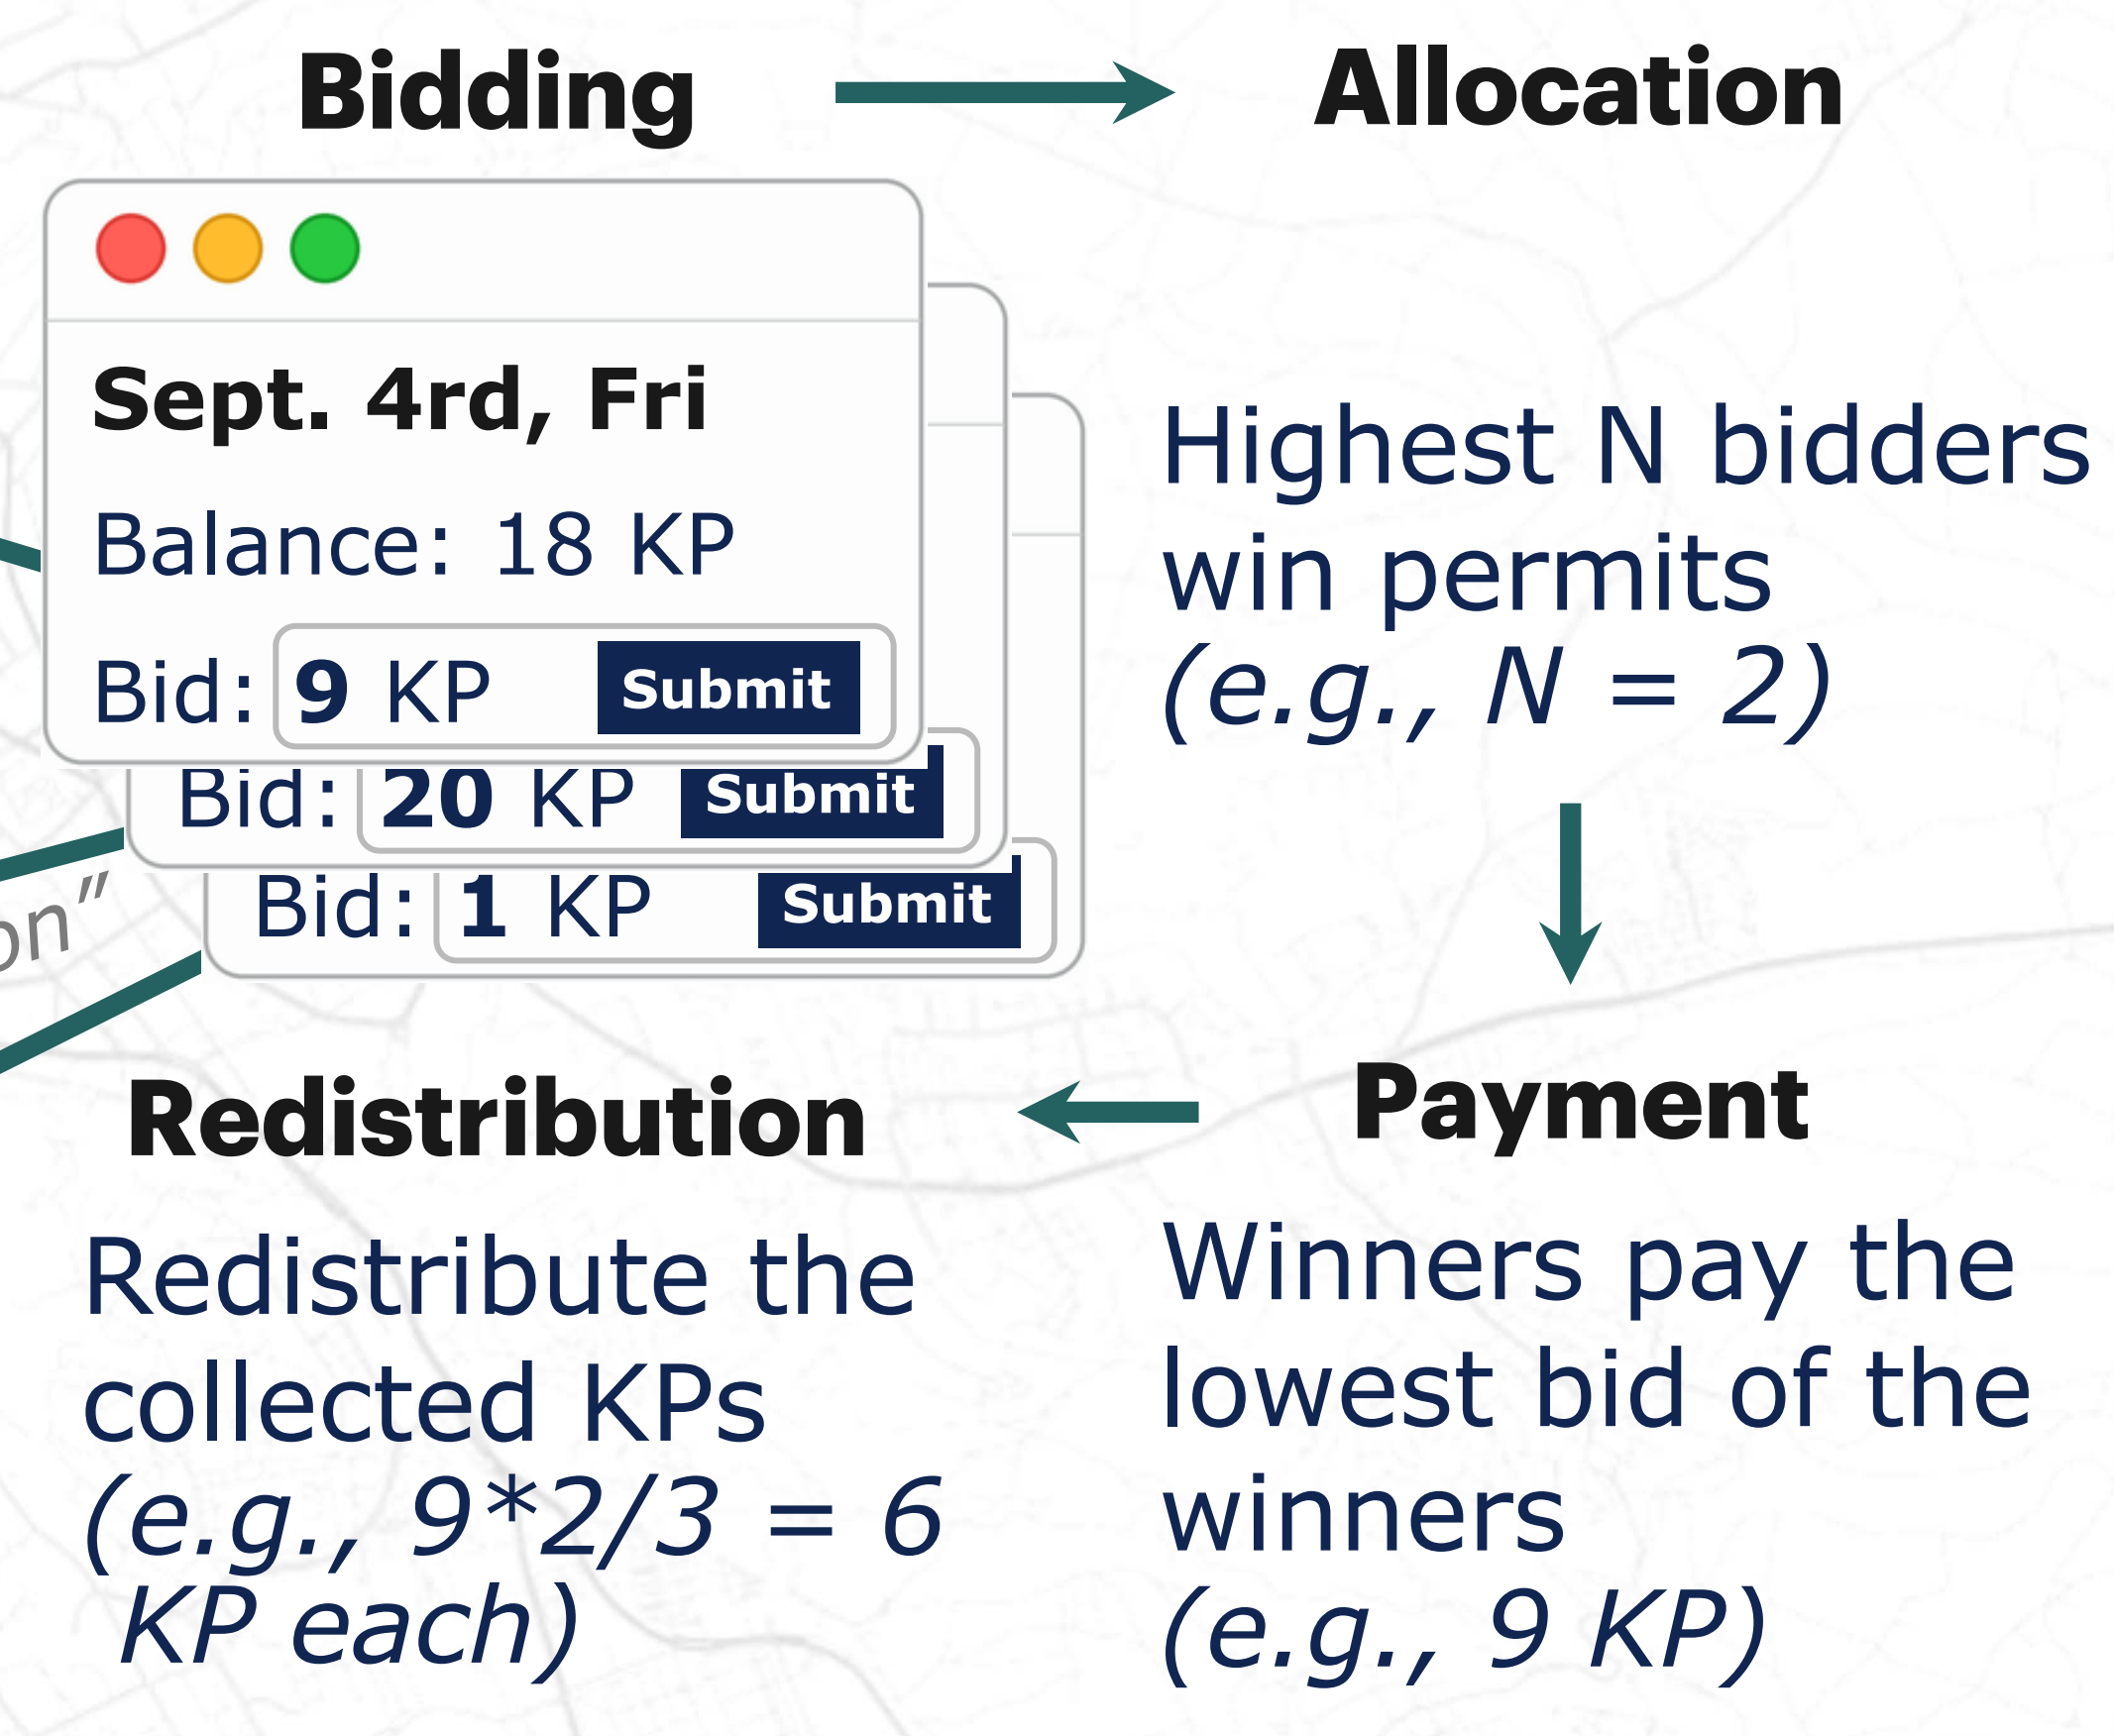

Check out our website for more technical details and next steps

Who Gets a Permit?

- Money?** Favors drivers with greater ability to pay.
- Lottery?** Only fair ex-ante. Repeated bad luck is possible.
- Rotation?** Fair but ignores who needs the permit most today.

Artificial Currency: Karma

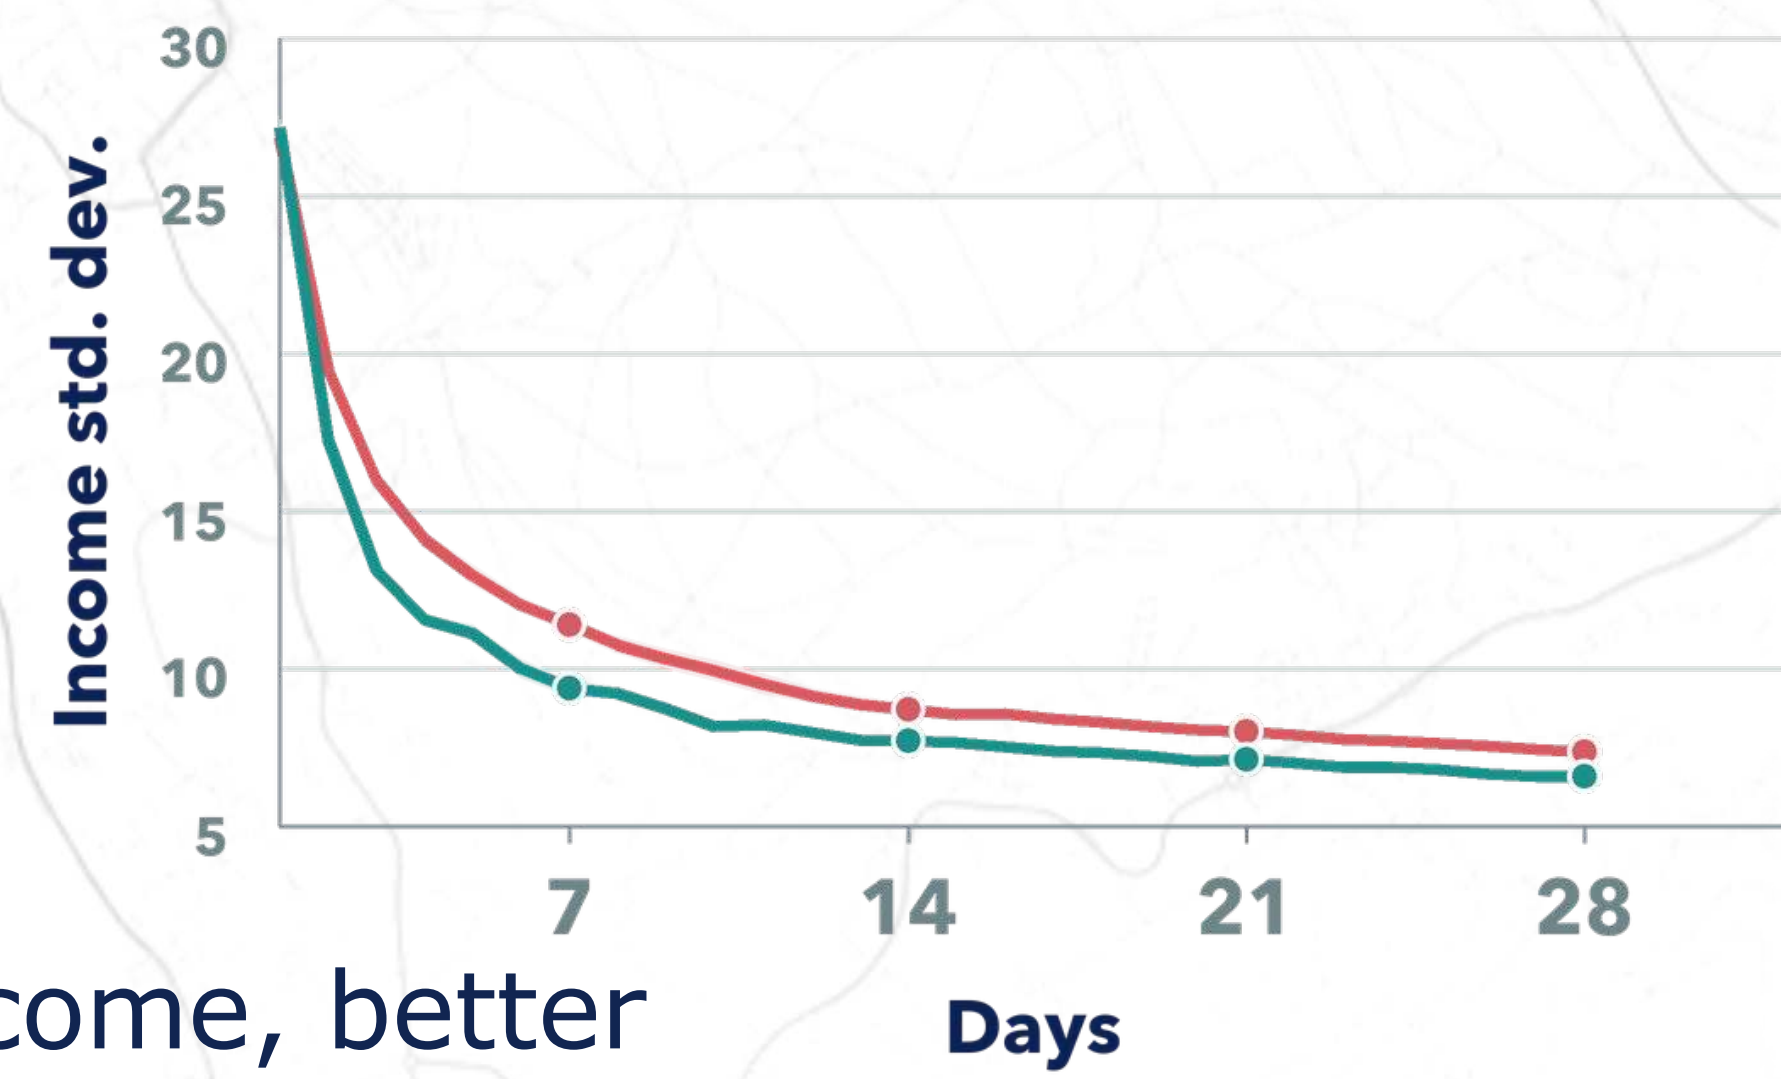

Drop-out Rate in 30 Days

(proportion of drivers leaving the market if average income is lower than a threshold in X days)

Patience window	Karma	Lottery
7 days	5.1%	10.3%
14 days	1.5%	4.6%
21 days	0.7%	2.6%
28 days	0.3%	1.2%

Average Income Dispersion

(Inequality)

Karma provides more stable income, better equality and is not affected by external wealth
